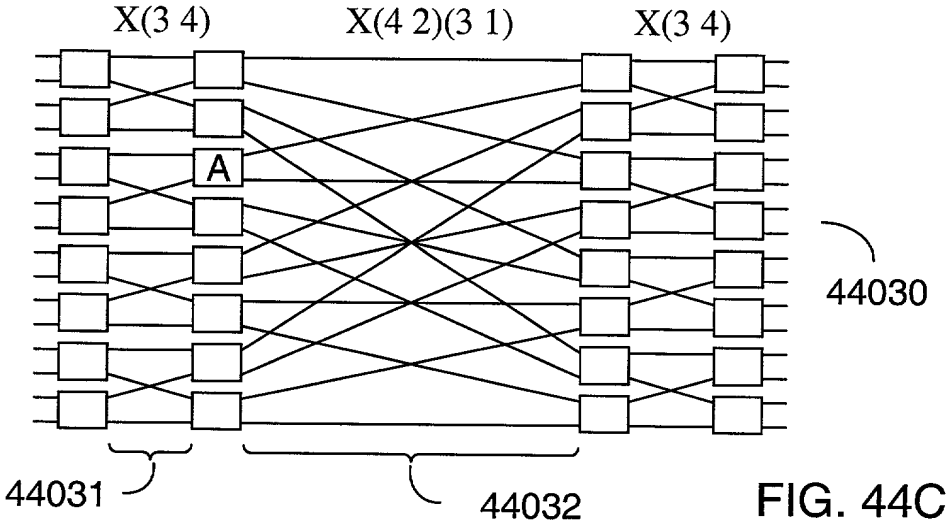

FIG. 44C

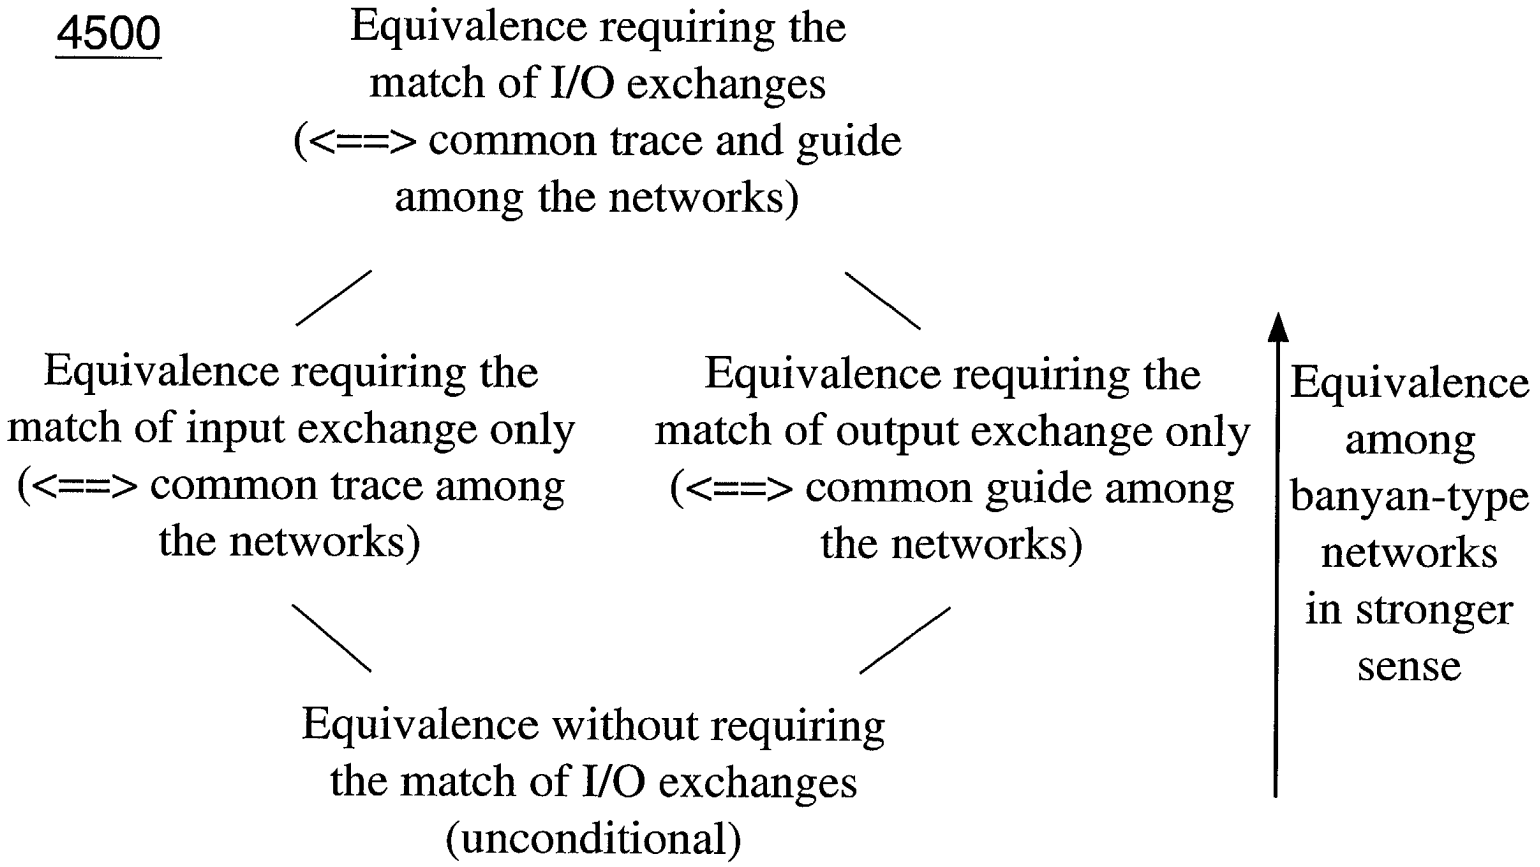
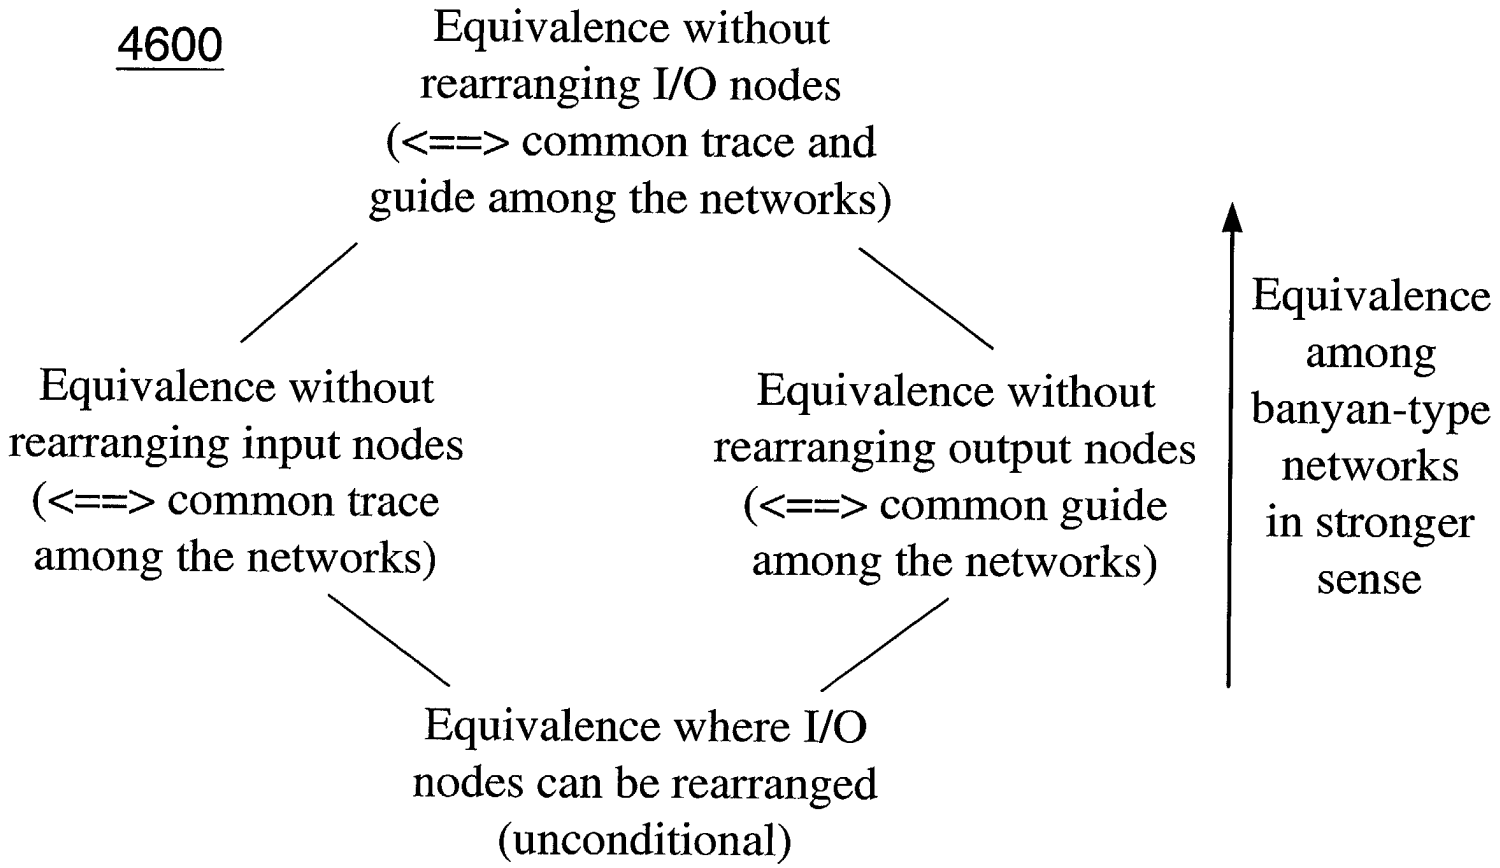


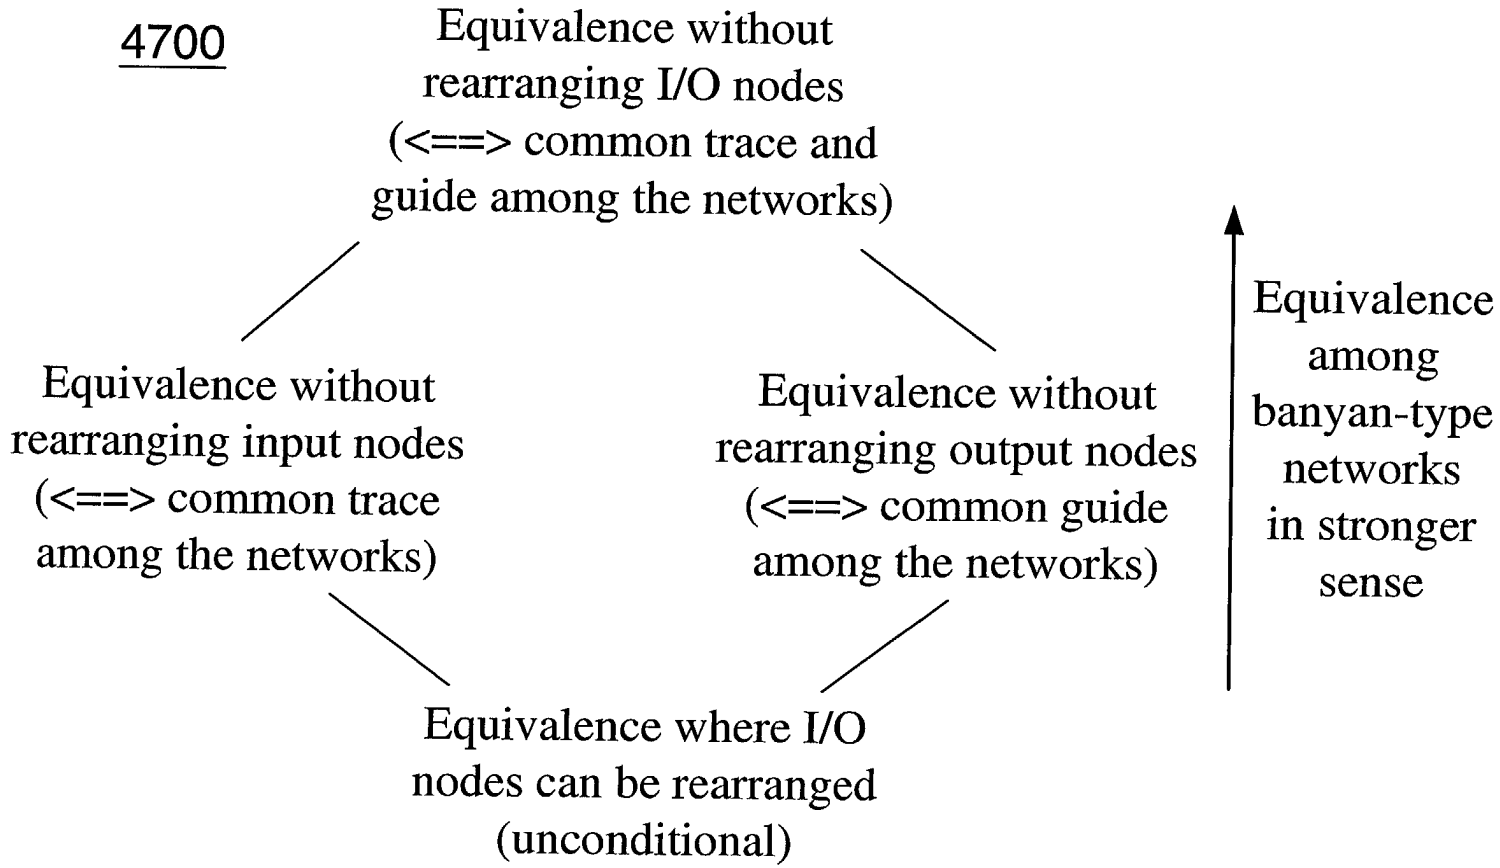
4500
Equivalence requiring the match of I/O exchanges (<==> common trace and guide among the networks)
Equivalence requiring the match of input exchange only (<==> common trace among the networks)
Equivalence requiring the match of output exchange only (<==> common guide among the networks)
Equivalence without requiring the match of I/O exchanges (unconditional)
Equivalence among banyan-type networks in stronger sense

FIG. 45



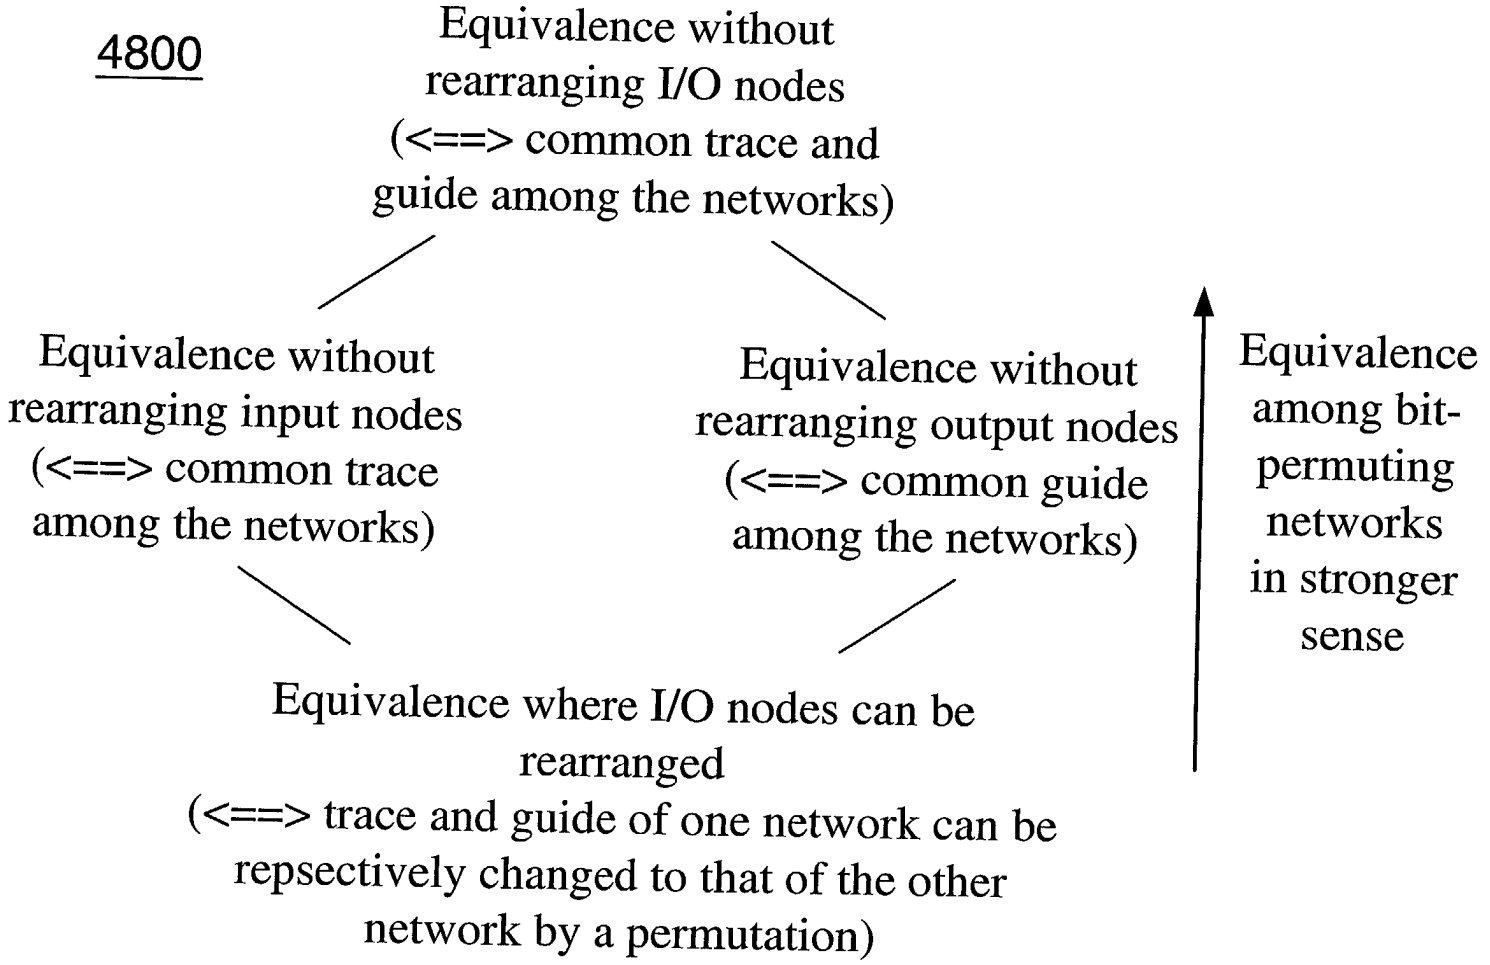
4600
Equivalence without rearranging I/O nodes (<==> common trace and guide among the networks)
Equivalence without rearranging input nodes (<==> common trace among the networks)
Equivalence without rearranging output nodes (<==> common guide among the networks)
Equivalence where I/O nodes can be rearranged (unconditional)
Equivalence among banyan-type networks in stronger sense

FIG. 46



4700
Equivalence without rearranging I/O nodes (<==> common trace and guide among the networks)
Equivalence without rearranging input nodes (<==> common trace among the networks)
Equivalence without rearranging output nodes (<==> common guide among the networks)
Equivalence where I/O nodes can be rearranged (unconditional)
Equivalence among banyan-type networks in stronger sense

FIG. 47



4800
Equivalence without rearranging I/O nodes (<==> common trace and guide among the networks)
Equivalence without rearranging input nodes (<==> common trace among the networks)
Equivalence without rearranging output nodes (<==> common guide among the networks)
Equivalence among bit-permuting networks in stronger sense
Equivalence where I/O nodes can be rearranged (<==> trace and guide of one network can be repsectively changed to that of the other network by a permutation)
